ECLA Code: **None**

Priority Number: **2000-01-21 BG2000000104098**

Abstract: The preparation is designed for the prevention and treatment of osteoporosis, for assisting the healing processes after fractures and injuries, for the prevention of any alterations of the osteal structure in patients with thyrotoxicosis, diabetes and after continuous cortisone treatment, for maintenance of the normal building and metabolism of the osteal tissue and the teeth. It ensures prophylactic and therapeutic daily doses of calcium and magnesium, the calcium resorption in the intestines and its successive metabolism, as well as the necessary amount of vitamin K1, taking part in the normal synthesis of the osteal protein osteocalcin and vitamins C and B6 necessary for the formation of the collagen. The quantities and the ratio between the active components ensure the mutual potentials of their activities. The preparation contains the following components: vitamin C from 13.50 to 14.00 g, vitamin D3 from 6600 to 9900 IU, vitamin B6 0.380-0.57 g, vitamin K1 1.20 -1.80 mg, calcium (as calcium carbonate) 1,20-1.80, magnesium 1.00-1.5 g and auxiliary substances up to 100. 1 claim
